

## Supplementary Data

**SUPPLEMENTARY FIG. S1.** Characterization of MHCII<sup>+</sup> immune cells along the lymphatic vessels of the mesentery. CD11c 63×, CD68, CD83, CD86 20×, MRC-1, and CCR6 40×. Images were chosen as representative images that best show distribution of the selected cells and their relation to the lymphatic vessel (*dashed white line* in overlay). MHCII images are in the *left column*, secondary marker in the *far-right column*, and the overlay of the two images in the *center column*. MHCII is *green* in all images and secondary markers are *red*, *red arrows* mark overlapping staining in cells.
